-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 1, 2, and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Hehnke US 2001/0007251 A1 published Jul 12, 2001.

3. Hehnke discloses an internal combustion comprising: an intake channel to which an air/fuel mixture is supplied in a flow direction; a carburetor (4) for preparing said air/fuel mixture; a starting device (5) configured in the region of said carburetor to enrich said air/fuel mixture during a starting operation of said engine; a bypass channel (30) having a first end (29) branching off upstream of said starting device viewed in said flow direction and having a second end (38) opening downstream of said starting device; and, a switching valve (36) mounted in said bypass channel and being movable from a position wherein said switching valve is essentially closed for starting said engine and, when said engine runs up (runs up has been interpreted broadly to include warms up), said switching valve being movable automatically into a less throttling position. The switch is shown to operated wherein said essentially closed position is a block position for starting said engine and the less throttling position is an open position when the engine has run up.

***Allowable Subject Matter***

4. Claims 3, 4, 5, and 7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Conclusion***
